deep litter freestall

Freestall divider model Comfort-NG

This freestall divider looks a lot like the model Profit. The Spinder curl, the shape of the lower bar, is almost similar. The characteristics of the divider are thus also very similar. Sturdy and robust, positioning the animals in a straight line in the cubicle. At the front the Comfort is more open, leading to even more space to lie down or stand up.

The Comfort cubicle can be mounted on support posts (one post per cubicle) or on horizontal tubing (1 per 2 cubicles). The system Comfort is thus very flexible. When mounted on support posts one can mount 2 cubicles on 1 central post.

- Optimal resting comfort due to careful design;
- Extra space at the front;
- Durability, due to suspended construction;
- Flexible to install;
- All the right dimensions are available;
- Allows for all types of matting materials.

Heifers and young stock are the future of a dairy herd, therefore they need to be well cared for. Dairy farmers working with a freestall system for every age group get better results. Housing of the animals in dry, well-designed stalls with comfortable dividers, is essential for the development of these animals.
